Download Agloco Viewbar on Monday 04 June 2007

Sorry to be so long between posts. There was no meaningful news to give you until today.

We have made a workaround regarding the ad server problem and we will finally be launching the Viewbar. Some, but not all, of our ad networks will be connected. These networks have enough ads on them, so we are comfortable releasing the software as we continue to work on the outstanding issues that remain with the other networks. All of the preliminary Viewbar functions are there, but with the ad problems we will not be initially launching with the personalized ad targeting. We will continue to develop this capability after we have launched and when it is available the new version of the software will be incorporated into your viewbar automatically.

Remember that this is the first version of the Viewbar (v1.0), and with the Viewbar being automatically self-updating software, gradual improvement (both aesthetically and functionally) will appear seamlessly (you also have an option to turn off this feature and ask for updates manually, though we recommend leaving the auto-updating feature active so that you always have the latest software as improvements are made).

This weekend the Viewbar download is being moved from the test servers to the main servers. We will NOT need to temporarily take down the web site as we had thought, so we will not be sending out an email warning on that. If the transfer goes smoothly, the first download emails will be going out Monday morning California time (early Tuesday in Asia).

Please remember:

If you have a Norton firewall you may be asked to allow access to "viewbar.exe" and "update.exe" (please check "Permit Access Always" for proper installation of the Viewbar). The Viewbar is currently available for Windows 2000, Windows XP, and Windows Vista and will work with IE (Internet Explorer) or Firefox browsers.

I'm sure you are all just as ready for the Viewbar release as we are!
